

Profile

I'm an upbeat, passionate developer who loves to get stuck in and create amazing things. My early career background is in graphic design and game development, which gives me an edge in creating visually stunning interfaces and highly functional user experiences.

Throughout my development career, I've been highly involved with the entire application development project lifecycle. This spans ideation, wireframing, designing, mapping, developing, testing and deployment.

Aside from professional work, I actively contribute to the open-source community by fixing bugs, adding features, and submitting pull requests to the tools and packages I use frequently. I also actively own and maintain a few packages.

Key Skills and Competencies

Full-Stack Development: Proficient in end-to-end web and mobile application development (*strong focus on React, React Native, Node SSR-based frameworks like Next & Remix - lots of experience with Firebase*).

UI/UX Design: Skilled in crafting intuitive and aesthetically pleasing user interfaces (*Figma & Adobe CC*).

Open Source Contributions: Regularly contribute to open-source projects (*via NPM*).

Graphical Design Expertise: Savvy to modern graphical design practices that help maintain seamless communication between design and development.
